

DEENADAYALAN K

Software Engineer — AI & Data Platforms

Chennai, India | +91-8838109535 | deena011197career@gmail.com

Portfolio: deenadayalan-k.vercel.app | [LinkedIn](#) | [GitHub](#)

Open to relocate: Bangalore / Hyderabad • Serving notice — available to join from 29 Dec 2026

PROFESSIONAL SUMMARY

Software Engineer with 3+ years building an enterprise ETL and data validation platform with Python, Node.js, FastAPI, Pandas and RabbitMQ. Benchmarked it reconciling 50 million rows with zero differences on a single machine, shipped an LLM feature (OpenAI API) that turns plain-English business rules into Pandas code, and built an MCP server that lets Claude operate the platform. Promoted to Software Engineer in 2026; focused on AI features over large, messy enterprise data.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL

AI / LLM: OpenAI API, Claude, MCP (Model Context Protocol), LLM Integration, Prompt Engineering, Natural Language to Code

Backend & APIs: Node.js, FastAPI, FeathersJS, Express.js, REST APIs, Microservices

Data Engineering: ETL Pipelines, Data Reconciliation, Data Validation, Data Quality, Pandas, Dask, RabbitMQ

Databases: PostgreSQL, MySQL, Oracle, MongoDB, Apache Hive

Frontend: Angular, React, Next.js

Tools: Git, Node-RED, WebSockets, Claude Code

Evaluated (R&D): Apache Spark, Trino, Apache Ignite, Go, Rust, React Flow, shadcn/ui

PROFESSIONAL EXPERIENCE

Tristha Global Pvt. Ltd. — Chennai, India

Sep 2023 – Present

Software Engineer (Apr 2026 – Present) • Associate Software Engineer (Sep 2023 – Apr 2026)

Travis — enterprise low-code ETL and data testing platform

- Built a data reconciliation engine (hash-partitioned by join key across RabbitMQ queues and Python workers) that scaled from failing under 1GB to comparing two 75GB files in 7 hours on one 16GB machine (proof of concept).
- Benchmarked the platform at 50 million rows: loaded CSV to MongoDB at ~52,800 rows/sec and reconciled every row across CSV, DAT, MongoDB and Hive with zero differences.
- Shipped an LLM feature (OpenAI API) that converts plain-English business rules into Pandas expressions, so non-developers can build transformations without code.
- Built an MCP (Model Context Protocol) server that exposes Travis ETL operations as tools Claude can call through natural language.
- Fixed a critical failure where RabbitMQ dropped validation workers under load, traced through broker logs; a 50M-row DAT-to-Hive validation went from stalling at 17–74% to 100% complete.
- Migrated the core transformation engine from Node.js/Formula.js to a Python (Pandas, FastAPI) microservice.
- Designed a message-driven architecture: custom Node-RED nodes wired through RabbitMQ to Python workers, running pipelines independently of the central server and ending bulk-load memory crashes.
- Designed a metadata-driven data quality framework with configurable duplicate, null and format checks.
- Built a General Ledger (GL) validation engine that evaluates user-defined business-rule expressions and generates Pass/Fail results automatically.
- Led R&D of the Joiner node for large-dataset joins; streamed live pipeline status to the Angular dashboard over WebSockets.

- R&D: evaluated Apache Ignite, Trino, Dask, Apache Spark, React Flow, shadcn/ui and a Next.js/Go/Rust architecture for next-generation platform direction.

Freelance Software Developer — Self-Employed

Sep 2022 – Aug 2023

- Built a Hospital and Patient Management System from scratch (MongoDB, Express.js, React, Node.js): REST APIs, authentication, database schema and role-based access control for patients and clinical staff.
- Migrated an enterprise Angular application (Blockyt) from Angular 8 to Angular 14, rewriting legacy code to support newer npm packages and modernise the UI.

PROJECTS

CuraSynk — Offline-First Family Health Records App

Flutter, SQLite, Android

- Built and released an offline-first Android app (v1.0.1, signed APK and Play Store AAB) with family profiles, medical history tracking, medication reminders with local notifications, and an offline PDF/image document viewer.
- Live demo, direct APK download and source on the portfolio site and GitHub.

DataNerva — Prompt-Based Data Validation Engine

In progress

- Building a data validation engine driven entirely by natural-language prompts: users describe checks in plain English and the engine runs them, with no SQL queries or code.

AI Document Manager

In progress

- Building a document storage and viewing app where users upload files and get insights by asking questions in plain language.

AI Communication Assistant

In progress

- Building a personal assistant that connects communication channels and returns summaries on request through plain-language prompts, to improve daily productivity.

EARLIER EXPERIENCE

- **Engineer – Condition Monitoring**, MVS Acmei Technology Pvt. Ltd. (Aug 2021 – Aug 2022) — Collected and analysed vibration data from industrial rotating equipment to detect faults, and wrote diagnostic reports with predictive-maintenance recommendations.
- **Graduate Engineering Trainee**, Sri Sai Equipments Pvt. Ltd. (Dec 2020 – Jul 2021) — Supported operations and maintenance teams with inspection, troubleshooting and installation of industrial machinery.
- **Field Service Technician**, Self-Employed (Aug 2019 – Jul 2020) — Installed and configured billing software, POS systems, kiosks and Windows systems at retail and hotel client sites.

EDUCATION

B.E. Mechanical Engineering — Saranathan College of Engineering (Anna University)

2015 – 2019

Tamil Nadu, India | CGPA 7.62/10

Languages: English, Tamil, Hindi
